## Reliable solutions for the dental office

### Highest medical standard

Compressed air used in dental practices must comply with highest sanitary and medical standards. This is why all METASYS META Air compressors work absolutely oil-free and are equipped with an integrated filter and dryer system (except Light models).

#### > Light versus Standard version

Almost all compressors are available in standard and light version

	Light version	Standard version
Prefilter	✓	✓
Microfilter	-	✓
Dryer	-	✓

### Quality in all details

#### > Filtration system

Double filtration system with a rating of 0.01 µm

#### > Membrane dryer

Powerful drying system for absolutely dry air

#### > Compressor technology

Low noise operation and maximum pressure up to 10 bar (META CAM)

#### > Air tank

Antibacterial inner tank powder coating to prevent corrosion

#### > Operating hours meter

To ensure the exact definition of maintenance intervals

#### > Thermal protection

Double, amperometric and temperature control for optimal safety

# METASYS Compressors

## For a smooth running practice

### Effective conservation of value for compressed air operated instruments and equipment

Moisture in the dental compressed air impairs the adhesion - e.g. of composite material - and therefore their durability. In addition, the moist environment offers optimum habitat for microorganisms. Dry compressed air, on the other hand, prevents the formation of biofilm in the tubes as well as corrosion on the compressor and operated instruments.

METASYS META Air compressors are equipped with an extremely powerful membrane filter system. Moisture in the dental compressed air is therefore effectively prevented, even under the most difficult climate conditions. METASYS membrane dryers are maintenance-free.

### Best treatment results through hygienic compressed air

Oil-operated compressors are not suitable for use in dental practices: Even the smallest traces of oil in the compressed air pose a negative influence on the durability of filling material on the tooth substance. At the same time, lubricating oil causes deposits in the air supply lines. They cause loss of power and premature wear and tear of compressors and compressed air operated instruments.

META Air compressors work absolutely free of oil and therefore ensure optimum, long-term treatment results.

### Optimum sanitary conditions for the protection of patient and treatment team

During the dental treatment, compressed air comes in contact with open wounds. At the same time, the use of compressed air causes an aerosol cloud, which poses a significant risk of infection for the dental staff and patients. A hygienic preparation of dental compressed air is therefore imperative.

METASYS META Air compressors are equipped with a double filtration system with a rating of 0,01  $\mu\text{m}$ .\* It ensures odour-free compressed air and optimum protection from infection. To assure continuous sanitary conditions, the filters are replaced during maintenance.

\* METASYS compressors meet the requirements of classes 1/4/1 in accordance with the compressed air requirements of ISO 8573\_1:2010.

# METASYS Compressors

## Highest quality in all details

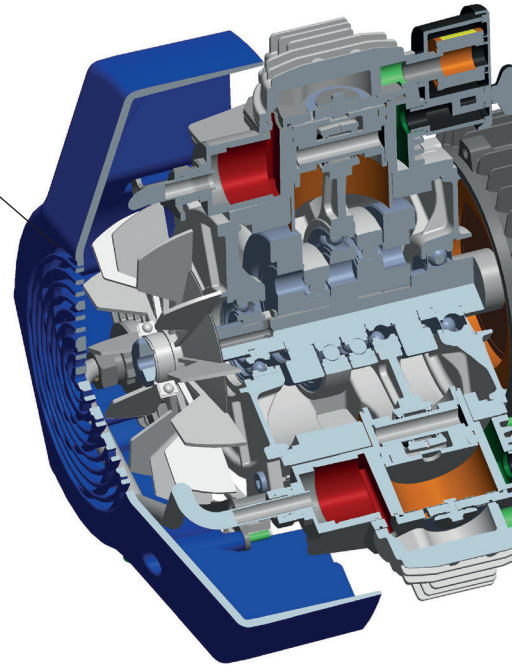

### Patented intake system

The intake air stream is channelled through a labyrinth of compressor components. This cools down the motor and the components and lowers the suction noise level.

In addition, numerous specially designed cooling fins on the outside of the unit allow for optimised heat dissipation.

### High-quality components for the toughest applications

The use of high-tech components in the electrical motors brings about a high degree of efficiency and a consistent operational motor performance. Heat-resistant ball bearings allow for smooth operation and increase the service life of the entire unit.

# METASYS Compressors

## The highest level of technology

The aggregate is the core of any compressor. The perfect interplay of electrical motor and compression technology guarantees the highest level of performance in everyday use. The use of high-quality components guarantees the highest level of reliability in the toughest applications. METASYS compressors meet these customer requirements in any given situation.

### Optimised compression process

The latest generation of META Air compressors will convince with a new technical feature: Each cylinder is equipped with its own air filter. This improves the intake air filtration process meaning there is sufficient air volume for compression at all times. This optimised compression process increases the service life of the pistons and valves.

## Powerful solutions for large practices and dental clinics

Due to the increased air volume requirement, large practices and dental laboratories require powerful compressors with a high compressed air output. The tank capacity of these high-performance compressors has been calculated accordingly and also allows you to work without any interruptions.

The META Air 450, 650, 900 and 1300 Light compressors by METASYS meet these requirements to the highest degree.

# META CAM

## Compressors for CAD/CAM milling systems

Conventional dental compressors within the standard pressure range of 5 to 7 bar are unable to satisfy the requirements of many dental milling machines. However, CAD/CAM milling systems require an operating pressure of up to 10 bar, in order to guarantee safety with a tool change for example. META CAM compressors have been designed specially for such systems, because they guarantee a pressure range of 8 to 10 bar in continuous operation. Equipped with membrane drying and a double filtering process, they ensure the supply of oil-free, dry and perfectly hygienic compressed air, which is decisive for the quality of the end products. The right compressor for many of the CAD/CAM systems available on the market can be found on the basis of the respective requirements profile (performance and output) of the milling system. All META CAM compressors are also available with a cover, to ensure quiet operation. In this way it is possible to reduce the noise level to 54 dB(A).

### The right choice

We are happy to assist you in choosing the right META CAM compressor for your specific milling or grinding machine. You can find further information at [www.metasys.com](http://www.metasys.com).

### High pressure range up to 10 bar

META CAM compressors operate within a pressure range of 7 to 10 bar.

### High quality components in the units

META CAM units are equipped with specific components, in order to counter the loads within the high pressure range.

### Optional sound proofing cover

The majority of META CAM compressors are optionally available with a sound proofing cover.

\* also available with 60 Hz

A compressed air requirement assessment must be carried out prior to selecting a META CAM compressor or the selection must be validated in conjunction with the milling machine following installation.

## Guarantee period

The guarantee period for compressors is 12 months. If the required yearly maintenance, the "1500 hours" or the "3000 hours" maintenance are performed, the guarantee period can be extended by 1 year, although by no more than 2 years in all. The maximum possible guarantee period is therefore 3 years.

## Maintenance intervals

Compulsory maintenance rates have to be met precisely. The following maintenance and inspections have to be done: yearly filter cartridge - exchange ("Filter cartridge - exchange kit"), the 3000 or 1500 hours maintenance, depending on compressor versions, with the "3000 hours kit + valve block (complete)" or the "1500 hours kit 24/30 + valve block (complete)". The required inspections have to be registered inside the METASYS manual. METASYS reserves to himself the right to request those registrations to ascertain maintenance and inspection rates.

### Maintenance kits

on inquiry, also by email: [info@metasys.com](mailto:info@metasys.com)

Please provide the module number and serial number of the compressor to be serviced.

### 3000 hours kit + valve block (complete)

META Air (from META Air 70), META Air Light (from META Air 70 Light), META CAM models

### 1500 hours kit 24/30 + valve block (complete)

META Air 24/30

### Filter cartridge - exchange kit

all META Air, META Air Light, META CAM models

## Accessories

### METASYS covers

Different covers to minimise noise can be ordered for the relevant META Air / META CAM versions.

### Digital Manometer

Item no. 40400005

The digital manometer is a measuring device for negative pressure and compressed air. The measurable pressure lies between -1 and 30 bar. It enables the exact determination of suction vacuum, air and water pressure of dental units.
